 Alexandria, VA 22313-1450

Sir:

This Third Supplemental Information Disclosure Statement follows the Second Supplemental Information Disclosure Statement filed on June 17, 2003.

Applicant wishes to call the Examiner's attention to publications (References AO-AT) listed in the Other Art section of the enclosed PTO Form 1449A.

The publications cited are the same as those submitted and discussed in the Response to Final Rejection mailed July 27, 2004, in related patent application Serial No. 09/794,456. The Examiner for the instant application and for the aforementioned application Serial No. 09/794,456 is the same.

Applicant cites the publications because they may also pertain to the instant application, and

consideration by the Examiner could expedite the prosecution of this application.

Reference AO, the Pediatric Transplantation publication, is cited to demonstrate that cell handling and preparation techniques have been well known for decades. Evidence is presented therein that stem cells harvested from bone marrow and from blood of patients have long been known and isolated as part of national blood bank programs. The Strauer et al. publication (of record) includes such bone marrow stem cells.

Reference AP, the Wollert et al. publication, is cited to demonstrate that bone marrow processing is long established in the medical art; that high pressure injection of cells, such as reported by Strauer, is not required to achieve heart repair; and that providing a sufficient number of cells and preventing remigration are not insurmountable problems.

Reference AQ, the Transplantation publication, is cited to illustrate that cell separation utilizing the Ficoll technique has been known in the medical art for years. For example, this technique was reported in 1971.

Reference AR, the Kocher et al. publication, is cited to explain that “vessels,” mentioned as Reference 30 in the August 28, 2001 Orlic et al. publication relied upon by the Examiner, refers to a capillary network incapable of supporting a “complete functional repair.”

Reference AS, the Merriam-Webster Online Dictionary, defines the word “form” to mean “to become formed or shaped, or to come into existence.” Thus, the instant claims containing the terms “forming a new artery” and “forming new cardiac muscle” are so defined.

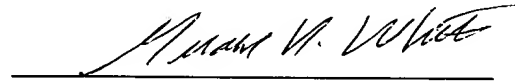

Reference AT, the NIH report, is cited to demonstrate that “new” arteries is used in the medical art and thus well understood by those skilled in the art.

Applicant certifies, in the attached Certification, that all of the references cited in this Third

Supplemental Information Disclosure Statement were located during preparation of the above-mentioned Response to Final Rejection in related patent application Serial No. 09/794,456 and thus were discovered less than three (3) months prior to the date set forth below.

Respectfully submitted,

Date: July 27, 2004

Alexandria, VA 22313-1450

Sir:

I, Gerald K. White, Attorney for Applicant, hereby state that the references cited in this Third Supplemental Information Disclosure Statement ("IDS") were first discovered by me following the June 1, 2004 Final Office Action for related patent application, Serial No. 09/794,456. Such discovery time is less than three (3) months prior to the date of this Third Supplemental Information Disclosure Statement.

I further state that no item of information contained in this IDS was cited in a communication from a foreign patent office in a counterpart foreign application, and, to my knowledge, after making reasonable inquiry, no item of information contained in this IDS was known to any individual designated in 37 C.F.R. 1.56(c) more than three (3) months prior to the filing of this statement.

Respectfully submitted,

Date: July 27, 2004
